

Challenges with running RTX5

1. Can download the compiled code but cannot run it. Execution seems to hang once Program is Loaded onto the Board.
2. Cannot Compile -> There is an error message that the code size has exceeded the limit.

Perform the following steps **BEFORE** creating a new RTX project.

Solution:

1. Go to Project->Manage-Pack Installer
2. Select the correct board on the left (All Devices -> NXP -> KLxx Series -> KL2x -> MKL25Z128xx4
3. On the right Select ARM::CMSIS 5.6.0 and remove 5.7.0. If 5.7.0 is not installed, then **DO NOT** install it.

If everything is working fine, do not upgrade or install any new Software Pack for the Keil IDE and RTX RTOS.
